INTERSECTION TURNING MOVEMENTS // FULLY AUTOMATED DATA CAPTURE

Austraffic is the industry leader in traffic and transport studies. We have skilled representatives in every state with the knowledge, equipment and resources to successfully deliver the results you need.

Our commitment is to deliver cost effective data of the highest quality, presented in a format that is practical to you.

Accurately recording how many vehicles or individuals use an intersection and what manoeuvres they perform requires specialist expertise.

Innovative technology

Using state of the art technology, Austraffic is able to collect quality video data at all hours, day or night; which is especially useful for managing personnel, resourcing and WH&S issues.

- Turning movement studies
- Roundabout studies
- Midblock studies
- Queue & delay studies
- Pedestrian & bicycle studies.

Accurate data

Our experienced staff can assist you with survey design to ensure the best outcomes are achieved to meet your needs.

Data is typically collated into 15 min blocks, but these can be customised to suit your individual requirements. Peak hour data is also calculated and presented with the survey results.

Detailed analysis

Austraffic has superior analysis tools to produce accurate data and deliver the meaningful reports you need, including extensive classification reporting or a simple light/heavy split. 12-bin Austroads breakdowns are available.

Auditable counting technology

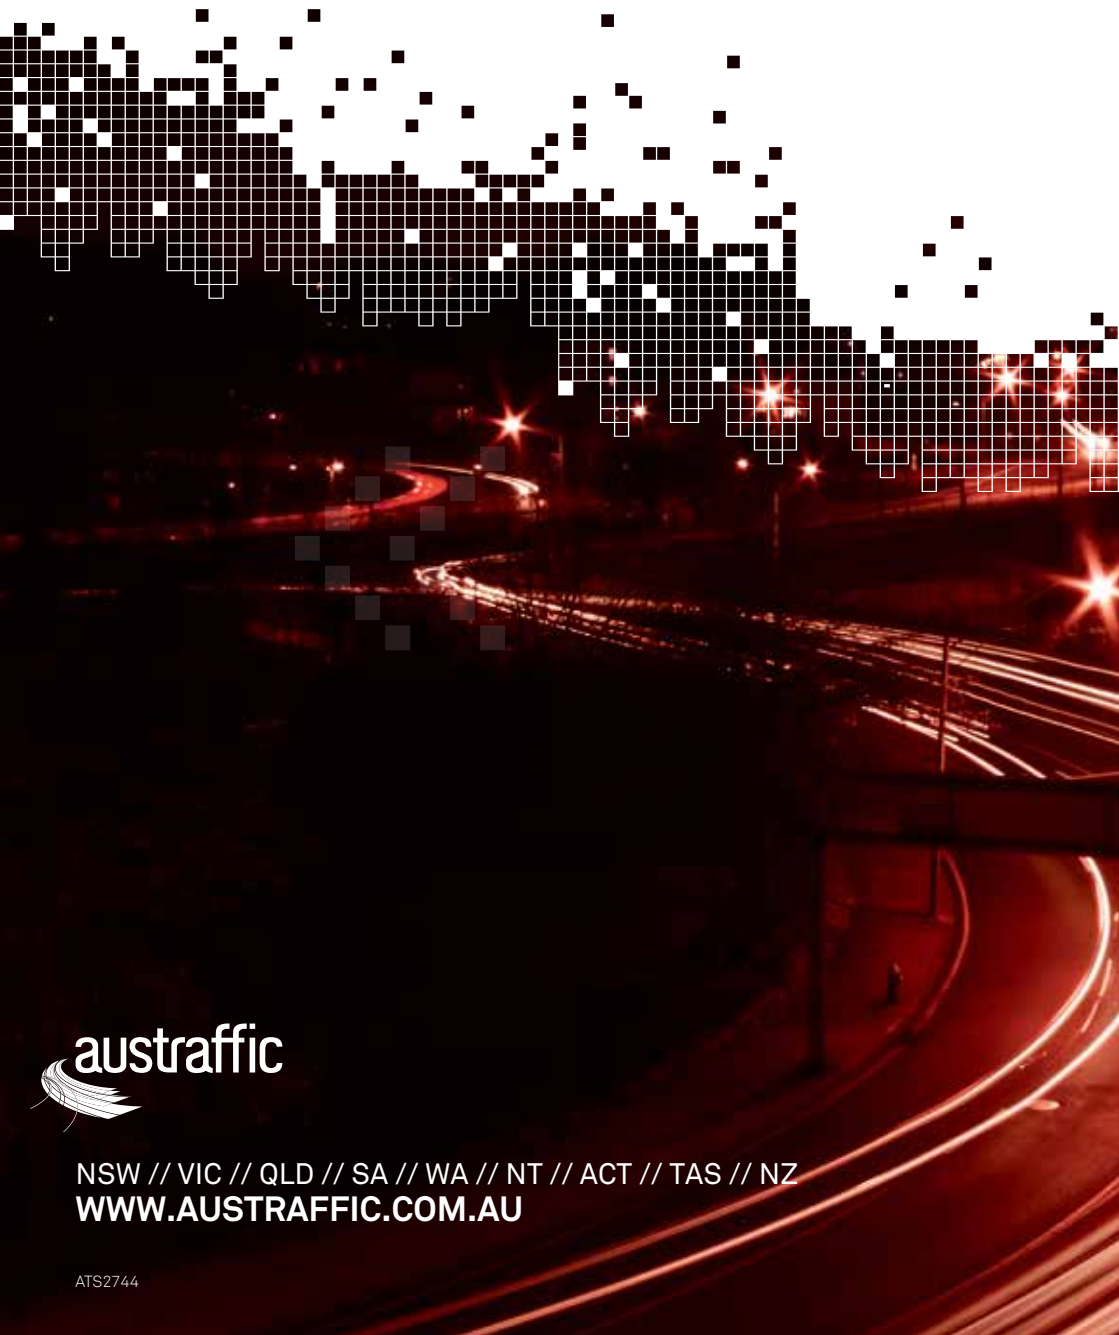

Austraffic's innovative technology enables video capture of the count so results can be reviewed, audited and verified.

- Excellence in resource planning and deployment
- Excellence in systems and software
- Excellence in data integrity and validation
- Excellence you can count on.
